

HIPAA ASSESSMENTS

Cerium uses the same tools as hackers and delivers real-world evaluations of current security controls. Basing all work on defined HIPAA security standards, Cerium works with hospitals and clinics to identify potential vulnerabilities, so that these weaknesses can be fixed in a proactive manner.

Cerium Can Help You

- Identify and analyze your current risks
- Offer realistic recommendations to address your security needs
- Give you access to our expert-level engineers and consultants

The Value of a HIPAA Security Assessment

- **Establishes a Baseline:** Good, bad, or ugly — an assessment measures exactly how well or how poorly your protections are working
- **Provides a Roadmap:** Once holes are identified and prioritized according to risk, steps can be taken to repair them

End Results

Once the assessment is completed, Cerium will deliver:

- An Executive Summary outlining any current risk
- A Comprehensive list of vulnerabilities prioritized by risk to the hospital
- A Complete set of recommendations to address deficiencies

Cerium's Certifications

CISSP, CEH, CISA, CRISC, CAP, ISSMP, CISM and ITIL-FV2

“We have had several vendors in the past that provided security updates and purported that they could handle a HIPAA assessment. Cerium has verifiable qualifications, and we were particularly impressed with that. They were also very professional and just a great company to work with.”
